MICROWAVE

EMCORE's fiber optic delay lines provide bandwidth that is essentially independent of fiber length, loss or delay, and triple transit signals that

are immeasurable. In addition to enhanced electrical performance, the delay lines provide several mechanical advantages. EMCORE's technology takes advantage of the rigid yet flexible properties of fiber optic cable to provide repeatable enhanced phase and group delay characteristics. The small size of these components allows for a long delay in a compact package with the superior temperature stability of fiber.
