

PicoYL-20

YSL Photonics' PicoYL-20 has a continuously tunable pulse duration from 200ps to 2ns and repetition rates from 30 kHz up to 1 MHz. The short pulse duration, high repetition rates combined with over 150kW peak power give high speed, permanent black/color marking on a variety of metals, thin film coating and thermal sensitive materials. The single mode beam quality picosecond pulses with over 150kW peak power open up a variety of micromachining applications such as SiC/Silicon cutting, resistor trimming and marking of transparent material. The laser is completely controlled via an industry standard digital interface with optional DB25 or RS-232.
